Carrier's New Display Improves Temperature Verification for Refrigerated Haulers

SYRACUSE, N.Y., Nov. 28, 2011 – Haulers now have an easy way to keep track of the refrigerated loads they pull – Carrier Transicold's Dual-View Temperature Display, an external temperature and status indicator that provides a reverse image in the rearview mirror so it appears correctly for drivers at a glance. Carrier Transicold helps improve global transport and shipping temperature control with a complete line of equipment for refrigerated trucks, trailers and containers, and is a part of UTC Climate, Controls & Security Systems, a unit of United Technologies Corp. (NYSE: UTX).

An optional accessory available from Carrier Transicold's North American dealer network, the Dual-View Temperature Display mounts on the front corner of a refrigerated trailer, behind the driver for easy visibility in the mirror. The driver can verify the temperature inside the trailer without having to leave the cab to check the unit controller. Large amber LED numerals show temperature in up to three zones in Fahrenheit or Celsius.

As a "dual-view" device, the display can be switched from reverse to normal view for yard monitoring of parked trailers. The bright display is easy to read in direct sunlight and automatically dims to reduce glare for evening and night viewing.

"The Dual-View system is more than just an easy-to-read display," said Jason Forman, senior product development manager for Carrier Transicold's Performance Parts Group. "It provides independent verification of box temperatures via its own sensor, or sensors in multi-temp applications. It also shows refrigeration unit status – cool, heat, defrost or warning."

Dual-View Display Helps Refrigerated Haulers – 2

Sealed electronics protect the unit from weather and high-pressure water spray. The Dual-View Temperature Display is compatible with most Carrier Transicold and competitive trailer units, and has a two-year limited parts warranty.

For more information about the Dual-View Temperature Display, turn to the experts within the Carrier Transicold dealer network, or visit www.performanceparts.carrier.com.

About Carrier Transicold

Carrier Transicold helps improve transport and shipping temperature control with a complete line of equipment and services for refrigerated transport and cold chain visibility. For more than 40 years, Carrier Transicold has been an industry leader, providing customers around the world with the most advanced, energy efficient and environmentally sound container refrigeration systems and generator sets, direct-drive and diesel truck units and trailer refrigeration systems. Carrier Transicold is a part of UTC Climate, Controls & Security Systems, a unit of United Technologies Corp., a leading provider to the aerospace and building systems industries worldwide.
